## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a member containing conduits to provide for a cyclonic flow within an adjacent collection chamber.

Group II, claim(s) 22-33,38,39, drawn to method to cyclonically separate particles for analysis.

Group III, claim(s) 12-21,34-37, drawn to apparatus/method to cyclonically separate particles within a microcentrifuge tube.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I is directed to use of a member that both contains the conduits and *may be* coupled to any collection vessel for separation, which vessel may be a large jar; Group II is directed to a method to collect sample particles for analysis, which separation method may be carried out with conduits that extend into the top and side walls of the collection vessel of interest; and Group III is directed to a method to cyclonically separate particles within a microcentrifuge tube which may employ conduits that extend into the tube from the tube's exterior without any intervening member.
